

Notes on Excel Versions of the Pay Item Lists

Last Revised 2/1/2017

The Excel Versions of the Active English and Metric Items are being provided as a courtesy to our Project Design Consultants and others to save having to re-enter basic item descriptions.

Please do not alter the individual basic item descriptions as contained on these files except to add appropriate supplemental descriptions at the end of the item once the item is in the Summary of Quantities on the plans. An example of this would be to add the Station number to the “Removal of Old Bridge, Station” item (206A---). If you do not find a pay item, please contact your ALDOT liaison to assist you in either finding an item, or requesting that an item be added to the list of Unique Pay Items.

Helpful Notes:

- These lists are updated about every 60 days or more often if there have been considerable changes to the Unique Pay Item List.
- Columns A – C will always contain the Item Code, Item Unit of Measure, and Item Description respectively. Cell D1 of the Excel file will contain the Unit System (English or Metric) and cell E1 will have the date the list was run and will change as the list is updated. (Depending on where you may import these files on your system, you need to be aware that the E1 cell will contain the creation date of that version of the file and will change with each update.)
- As you can tell the Item Description field is a rather large field. We have tried to set the width to be large enough such that the entire Item Description will fit on one line. Should there be a description that is too large for the field, the description will extend to the next row and will be without an Item Code or Unit of Measure.
- As an FYI, ALDOT unit prices are in whole cents (two places to the right of the decimal).
